

Managed Care Economical Solutions

Managed Care Economical Solutions is an organization that has associated itself with experienced developers and manufacturers of innovative, environmentally responsible, biotechnology products based on the use of natural microbes and enzymes.

We are a company that provides solutions for a broad variety of industrial, commercial and consumer problems, in cleaning, sanitation, food processing and nutrition, waste water, pollution control and environmental remediation.

Our success can be attributed to our policy to associate ourselves with world leaders providing innovative, effective and high-quality products and solutions to meet specific customer needs.

At MCES we believe in putting the customer and his requirements first; timely delivery, superior products, technical services at competitive prices. We are dedicated to making a significant contribution to products and services that exceed expectations for value, consistencies, reliability and environment safety.

In our business area we have a complex product portfolio intended for more than 10 different industries and a sales network that spreads across Africa. We provide biotech solutions to improve industrial performance and quality while at the same time saving on water, energy, raw materials and waste.

Our Enzyme products are used in versatile industries such as Textile, Leather, Baking, Brewing, Detergent, Starch and Pulp & Paper and our micro-organisms products are used in various applications for Effluent treatments, Cleaning and odour control, Waste degradation, Bio-augmentation & Bio-remediation.

Our employees and associates comprise executives with a synergistic blend of experience and expertise in the field of biotechnology, sales, marketing and finance. Our affiliation with world leaders in the field of biotechnology offers us access to research scientist, engineers and technicians that utilise the most advanced instrumentation and analytical techniques to continuously achieve numerous technological advancements in solving industry's toughest problems.

Some of our most recent home grown product innovations include a biological urinal disc designed to supersede the original Paradichlorobenzene deo-block. This urinal disc “Odorite” is housed in an innovative yet aesthetically pleasing dome that is placed in the urinal. To compliment the urinal dome we have developed an odour control spray that is used in the areas that surround the urinal to devour the bacteria that causes the foul stale urine odour. Our most recent innovation is a product developed from an organic natural food source combined with a biodegradable surfactant designed to supersede formaldehyde type products used in portable toilets. “Blue Mac Portable Toilet Fluid” has been SABS tested for bacteristatic properties in the treatment of effluent.

Other well known brands such as Microzyme D60 have been on the South African market for many years and are very popular and extremely effective in the treatment of solid waste and pit latrines with high volume sales across Africa.
